SYNOPSIS

Project Title: Expense Management System (EMS)

1. Introduction

Managing expenses is an essential part of financial planning. Manual record keeping is time-consuming and error-prone. This project develops a digital Expense Management System using C programming and file handling to store and manage expense records efficiently.

2. Objectives

- Develop a secure login and registration system.
- Add, edit, and delete expense records.
- Categorize expenses such as Food, Travel, Bills, etc.
- Automatically calculate total expenses.
- Store data permanently using file handling in C.

3. Methodology

The system is implemented using C programming language. File handling is used for storing user credentials and expense records. The program follows a menu-driven structure including login, expense management, and report generation modules.

4. Applications

- Personal finance management.
- Student expense tracking.
- Household budget management.

- Small business expense tracking.

5. Conclusion

The Expense Management System provides a structured and efficient method to manage financial records digitally. It enhances programming skills and solves real-world budgeting problems using file handling concepts in C.
